

Reflective Target

Model GV-2430

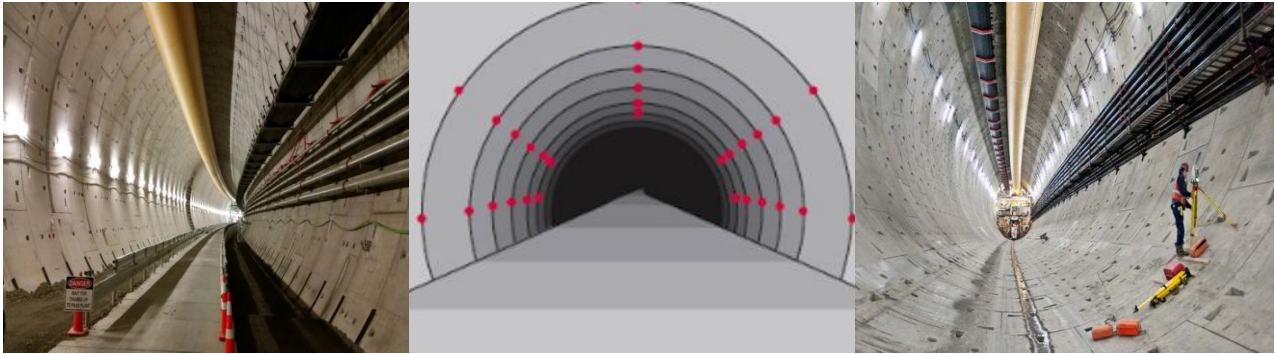

Reflective targets are the easy way to faster, accurate construction site surveying besides it is inexpensive reflective targets for numerous applications for surveyors & contractors.

The geovan reflective target is a cost-effective and versatile product line for many geodetic applications.

It is particularly suited for application in deformation and monitoring measurements in tunnel work.

Application

Measuring displacement of Concrete structures, Slope stability and Tunnel.

Specification

Model	GV-2430
Name	Reflective Target, Prism Target (Sister product)
Measuring Range	Up to 140meter
Sheet Size	56.50mmx56.50mm
Sheet material	3M™ Diamond Grade Reflective Sheet
Target material	Sturdy ABS plastic

The specification can be changed without prior notice for upgrade.
